## **XAMN – Beta Release**

Xler8tr announced today the launch of Xamn.

Xamn, developed by Xler8tr in conjunction with Abilitation, is a groundbreaking search engine that accesses data on the 50,000+ peer reviewed and UK publically funded medical and biological research projects.

Xamn holds the complete data set on its own schema and it is this which allows for complex but contextual filtering but with a flexibility that was just not available at the API level.

With Xamn, maybe for the first time, Pharma and Life Sciences companies can be independent of the traditional sources of interesting science, and look at earlier stage projects (pre POC) on a pro-active basis, but in a tightly targeted and efficient manner.

While in Beta Test Xamn is free to use for Pharma, Life Sciences and other potential sponsors.

### **About Xler8tr**

The Cambridge based pharmaceutical / life sciences accelerator with strategic partnerships with leading global advisory businesses advances the commercials of very early stage (pre POC) science through incorporation creating independent and transportable IT, legal and management accounting infrastructure vested with IP. Xler8tr creates a digital presence and initial branding. At the end of the 6 month course prospects articulate their commercialisation plans with supporting data room to attract next stage dilutive and non-dilutive funding.
